

SOWEENA[®]

DRY FAT 7-60[™]

The "Original" High Energy Dry Fat Feeding Program for Sows and Baby Pigs

- Fat fortified diets have been shown to provide many benefits for sows and pigs. Whether obtained before farrowing or during growth, added fat gives a pig extra energy.
- Additional energy not only helps increase the pig's chances for survival, but adds palatable nutrition to the pre-farrowing and lactation diets of the sow.
- As the pig grows, fat fortified rations continue to provide such benefits as improved feed efficiency, increased palatability and nutritional action.

Taste Appeal

Just before and after farrowing, sows need a palatable product to keep them eating. Baby pigs are just as fussy, but they will begin nibbling at a prestarter ration containing Dry Fat 7-60 shortly after birth. Since malnutrition is a major cause of pig losses, this is important in encouraging them to eat at an early age.

Convenient

The small size and dry form make Dry Fat 7-60 easy to handle and mix. In contrast, solid forms of fat need to be melted before they are added to the ration. And, when liquid fat is used in grind and mix operations, the fat can stick to the equipment.

Digestible

Dry Fat 7-60 looks different than ordinary fat. That's because it IS different. Choice white grease combines with easily digestible milk products in a special process causing the milk protein to form a capsule around the fat particles as they dry. These particles are four to five times smaller than liquid fats.

Controls dust

The tiny particles also help control dust and fines in feed. As the fat disperses evenly, the smaller, dusty particles are also dispersed. This prevents packing and hot spots. Improved dust control lowers feed spoilage and a cleaner atmosphere can help reduce respiratory ailments of pigs.

Benefits to sows

- Approximately 14% more pigs born alive.
- Bigger and stronger pigs at farrowing.
- Better milking sows.
- More pigs alive at weaning time.
- Sows recycle on schedule.
- More blood sugar available to baby pigs.

Benefits to baby pigs

- Palatability.
- Better feed conversion.
- Faster weight gains.
- Lower cost per pound of gain.

Guaranteed Analysis

Crude Protein	Minimum.....	7.00%
Crude Fat	Minimum.....	60.00%
Crude fiber	Maximum.....	0.15%

Feeding Directions

SOWS

<u>Gestation Diet</u>	<u>7-60</u>	<u>Top Dress</u>	<u>% of Added Fat*</u>
Top dress 1# 7-60/sow/day for 14 days prior to parturition.	2.0#		10.0
<u>Lactation Diet</u>	1.5#		7.5
Top dress 1/2# to 1# 7-60/sow/day during lactation (depending on sow condition).	1.0#		5.0
or	0.5#		2.5
Add 100# 7-60/ton to your present gestation or lactation diet.			
			*Based on 12 lbs total feed per sow per day.

Grind & Mix for Sows & Piglets

<u>Lbs of 7-60 Per Ton</u>	<u>% of Added Fat</u>
150#	4.5
100#	3.0
50#	1.5

Blend 7-60 as last ingredient in the ration.
