

  
*Merrick's*  
**SUPER KID**™  
 NONMEDICATED  
*Instant*  
*Kid Milk Replacer*

*Give baby kids that might otherwise die the strength they need to survive.*

**REPLACES DOE'S MILK**

SUPER KID Milk Replacer is carefully formulated to provide all the essential nutrients to maximize the survival and growth rates of baby kids. It's the *ideal replacement* for doe's milk.

**NUTRITIOUS/ALL MILK**

Kids digest protein from milk easier than they do from other sources such as soy products. All the protein in SUPER KID comes from a milk source, providing high utilization by baby kids. SUPER KID contains more protein than calf milk replacers and has no medications or antibiotics.

**CONVENIENT**

SUPER KID is available in 8 lb and 25 lb bags. The convenient 8 lb size allows you to keep Super Kid on hand for those times when newly fresh does aren't producing quite enough milk or if you don't have time to pasteurize milk for the next kid feeding.

**PACKAGING**

Packaged in easy-open bags with heat-sealed poly liners for moisture protection. 8 lb bags are packed 6 per carton. The paper used in Merrick's bags is recyclable and a renewable resource.

**NONMEDICATED**

**GUARANTEED ANALYSIS**

Crude Protein, minimum .....	26.00%
Crude Fat, minimum .....	20.00%
Crude Fiber, maximum .....	0.15%
Calcium, minimum .....	0.50%

## MIXING INSTRUCTIONS

Cup enclosed in each bag holds approximately 4 oz dry weight. Mix 1 level cup of SUPER KID Milk Replacer in 1-1/2 pints of 110°-120°F water. Slowly add powder to water while stirring.

<b>HAND FEEDING</b>		
The following instructions are a guideline for hand feeding SUPER KID. Reconstituted milk replacer should be approximately 90°-100°F.		
Age of Kid (days)	No. Feedings Per Day	Maximum Pints Per Kid Daily
1	4	*Colostrum
2 - 5	3 - 4	1
6 - 10	2	1½
11 - Weaning	2	2 - 3
*Heat to 135°F and hold at this temperature for 1 hour.		
<b>FREE CHOICE FEEDING</b>		
Use of a free choice feeder requires that the SUPER KID solution be kept cold (approximately 40°F) to prevent overconsumption. Train 1 or 2 kids at a time. Some will not learn as quickly as others, but it is worth the trouble to teach them.		

### *Tips on Feeding*

1. All equipment used for mixing and feeding should be thoroughly cleaned after each usage.
2. As a number of diseases can be passed on to kids when they drink raw goat milk, newborn kids should not nurse their dams at all. Feed heat-treated colostrum within the first 3-4 hours after birth and continue for the first 24 hours of life.
3. Provide fresh, clean water daily.
4. Provide high quality dry feed free choice after kids are 7 days old.
5. Kids may need treatment with an oral antibiotic if scouring occurs due to bacterial infection. Call your veterinarian if scouring persists.
